Are charging station cables not allowed to be run through cable trays

Overview

Due to their exposure to the open air because of the cable trays, the wires contained within need a very durable outer covering. The regulations dictate that the cables must either be Type TC (also known as Tray Rated) or must be metal-armored (Type MC). Grounding: Metallic trays can serve as equipment grounding conductors (EGC) if they meet NEC requirements. Separation: High-power and low-power cables must be separated to. NEC Article 392 explains cable trays, their components, appropriate wiring methods for cable trays, and instances where they are and are not permitted for use. It also focuses on construction and installation practices for cable trays. In this guide, we will explore the latest NEC requirements for EV charging stations, offering a comprehensive. Only approved tray-rated cables should be installed. Tray fill limits must be calculated properly. Firestop systems are required at penetrations.
