304 Stainless Steel Mesh Cable Tray Material

Overview

Known as 18-8 stainless steel (18% Chromium, 8% Nickel), 304 is the most widely used austenitic grade. Pros: Lower cost than 316L, stable supply, and excellent welding/forming performance. Best For: Commercial buildings, dry indoor environments, and low-corrosion industrial. This article focuses on the differences and advantages of SS304 and SS316L in cable tray applications. Decoding the Four Main Types of Stainless Steel Cable Tray The correct way to plan a system is to first clarify the “structure and application scenario” before deciding on the material grade. The. Excellent ventilation and heat dissipation performance, which can save the loss in the process of power transmission; 2. Simple installation and low cost; 3. Cablofil adapts to the most complex configurations, and its structure gives maximum strength for minimum weight.
