How to fix a Huawei beam splitter

Overview

Huawei Beam | HUAWEI Support GlobalKeep the two phones unlocked and the screens on, and hold the NFC sensors (located near the rear camera) of the two devi.

Key Takeaways

To fix Huawei Beam issues, ensure NFC is enabled, Huawei Beam is active, devices are unlocked, and troubleshoot common errors like “Beam is busy.”Enable Huawei Beam and NFCGo to Settings > More Connections on both devices.

Enable NF

C and Huawei Beam on both the sending and receiving devices. Make sure both devices are unlocked and their screens are on.

Proper File Transfer Procedure

Press and hold the file you want to share. Select Huawei Beam from the sharing options.

Align the NF

C sensors (usually near the back camera) of both devices until a signal tone confirms the connection. Keep devices within 10 cm during transfer. Troubleshooting Common Issues“Beam is busy” error: Restart both devices and try again.

Avoid sending multiple files simultaneously.

NF

C not working: Ensure no protective cases or metal objects are blocking the NFC sensors. Software glitches: Update your device firmware to the latest version to fix known bugs. Bluetooth/Wi-Fi activation: Huawei Beam automatically uses Bluetooth or WLAN for file transfer; ensure these are enabled.

Additional Tips

If problems persist, clear the cache of the NFC service in Settings > Apps > NFC Service. Test with smaller files to rule out size-related transfer issues. For persistent errors, consider contacting Huawei support or using the online chat for guided troubleshooting.

By following these steps, most Huawei Beam issues can be resolved, restoring smooth NFC-based file transfers between devices.
