73 kilometers of 24-core optical fiber cable

Overview

First-of-Its-Kind, Large-Capacity 12-Core Optical Fiber:In this press release, we announce the success of our transoceanic long-distance transmission exper.

Key Takeaways

A 73-kilometer 24-core optical fiber cable is a high-capacity, armored, outdoor-rated cable suitable for long-distance data transmission and backbone networks.

Cable Structure and Specifications

A typical 24-core optical fiber cable, such as the GYTY53 type, consists of 24 individual fibers arranged in loose tubes filled with a water-resistant gel. The fibers are usually single-mode, compliant with ITU-T G. 652.

D or G. 657. A1 standards, ensuring low attenuation, high bandwidth, and good bending performance for long-distance transmission.

The cable includes a central strength member, often a steel wire, around which the loose tubes and fillers are stranded into a compact, circular core. This core is protected by water-blocking tape, an inner polyethylene (PE) sheath, a corrugated steel tape armor (PSP), and an outer PE sheath, providing double-layer mechanical and moisture protection. The steel tape armor enhances crush resistance, rodent protection, and strain performance, making it suitable for direct burial, tunnels, or duct installations.

Mechanical and Environmental Features

Load capacity: Typically designed to withstand longitudinal stress and repeated bending without fiber breakage. Impact resistance: Can endure hammer impacts and twisting cycles without damage. Moisture protection: Gel-filled loose tubes and water-blocking tapes prevent water ingress, ensuring long-term reliability.

Temperature and U

V resistance: Outer PE sheath protects against environmental extremes, suitable for outdoor deployment.

Applications

A 24-core optical fiber cable over 73 kilometers is ideal for: Long-haul backbone networks connecting data centers or telecom nodes.

Outdoor LA

Ns and metropolitan area networks requiring high-capacity transmission. Direct-buried or duct installations where mechanical protection is critical. High-demand communication environments, including 5G backhaul and intercity fiber links.

Summary

This 24-core optical fiber cable provides high-capacity, reliable, and durable transmission over long distances. Its armored, gel-filled, and double-sheathed design ensures protection against mechanical stress, moisture, and environmental hazards, making it suitable for 73 km deployments in outdoor or underground networks. It supports single-mode fibers for long-distance, low-loss communication, making it a robust choice for modern telecom and data infrastructure.

First-of-Its-Kind, Large-Capacity 12-Core Optical Fiber:

In this press release, we announce the success of our transoceanic long-distance transmission experiment over 7,280 km using 12-core optical fiber. We spoke with the researchers

NEC and NTT successfully conduct first-of-its-kind long-distance ...

Combining these technologies, NEC and NTT conducted long-distance transmission experiments over 7,280km, assuming a transoceanic-class optical submarine cable, and succeeded

Indicator 1: Cable length

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Clarifications and scope: This indicator is alternatively expressed as the number of fibre pairs in the cable, for example 12 fibre pairs are 24 individual optical fibres.

24 Cores ADSS Fiber Optic Cable Price & Datasheet

Overview: The 24 Cores ADSS (All-Dielectric Self-Supporting) Fiber Optic Cable is designed for aerial power line and telecommunication network applications requiring high mechanical strength and

Project Waterworth: Meta announces world''s longest subsea cable

The 50,000km (31,070 mi) Project Waterworth is expected to be the world''s longest 24 fiber pair submarine cable, connecting the US, India, Brazil, South Africa, and other regions.

World''s first space division multiplexing long-distance optical ...

In this project, we constructed a cable of 12-coupled-core fiber, in which signal coupling occurs between 12 cores, while significantly reducing propagation delay dispersion, and installed it in

Cisco 10GBASE SFP+ Modules Data Sheet

Cisco SFP+ Active Optical Cables (Figure 5) are direct-attach fiber assemblies with SFP+ connectors. They are suitable for very short distances and

Handbook Optical fibres, cables and systems

After several field trials during the period 1977-79, such systems became available commercially in 1980. They operated at a bit rate of 34-45 Mbit/s and allowed repeater spacings of up to 10 km.

24 Core Outdoor Armored Double Jacket Fiber Optic Cable

24 Core GYTY53 fiber optic cable is used for direct buried underground, it suit for long distance and LAN fiber communications, we supply both the single mode GYTY53 cable and multimode GYTY53 cables.

Start of mass production of 13824 count multi-core optical fiber cable ...

Start of mass production of 13824 count multi-core optical fiber cable featuring one of the world''s highest fiber densities- Contributing through stable supply to the evolution of hyperscale data
