Aluminum materials for electrical distribution boxes Israel

Overview

Since its founding in 1990, the company has carried out hundreds of complex, high-quality and prestigious projects for the leading construction companies in the Israeli economy.

Key Takeaways

Aluminum is widely used for electrical distribution boxes in Israel due to its strength, corrosion resistance, and suitability for harsh environments.

Material Properties and Grades

Aluminum distribution boxes are typically made from aluminum alloys such as 5052, 5083, 5754, 6061, and 6082, which offer excellent corrosion resistance, mechanical strength, and electrical conductivity. These alloys are suitable for both indoor and outdoor installations, including aggressive industrial environments. Aluminum boxes are often finished with mill, anodized, or powder-coated surfaces to enhance durability and weather resistance.

Standards and Protection

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Aluminum enclosures for electrical distribution are designed to meet IP ratings such as IP65 or IP66, providing protection against dust, water jets, and harsh weather conditions. They are also suitable for EMC shielding and can be used in environments with high humidity, chemical exposure, or temperature variations. Some industrial-grade boxes are tested for water jet resistance and extreme environmental conditions, making them ideal for power plants, airports, photovoltaic systems, and underground infrastructures.

Types of Aluminum Distribution Boxes

Modular Boxes: Allow flexible installation of DIN rails, circuit breakers, and terminal blocks. Junction Boxes: Used for connecting multiple cables and protecting electrical connections. Automation Boards: Designed for industrial control systems and automation equipment.

Suppliers and Availability in Israel

Israel has a robust network of aluminum suppliers, with over 339 verified suppliers offering sheets, plates, and coils suitable for electrical enclosures. Key distributors include Phinergy, Dingsheng Aluminum Group, and Metline, providing aluminum sheets and coils in thicknesses from 0. 3 mm to 250 mm and widths up to 2000 mm.

Online distributors like Mouser Israel also offer aluminum boxes for electrical applications.

Applications

Aluminum distribution boxes are used in: Industrial plants: Cement, mineral oil, and nuclear facilitiesCommercial and public infrastructure: Airports, railway, and underground systemsRenewable energy: Photovoltaic and energy storage systemsResidential and commercial electrical installations: Indoor and outdoor protection SummaryAluminum is a preferred material for electrical distribution boxes in Israel due to its lightweight, corrosion resistance, and adaptability. Multiple alloys and suppliers are available locally, and boxes are designed to meet IP65/IP66 standards, making them suitable for a wide range of industrial, commercial, and residential applications.
