Blocking cable tray firewalls

Overview

Cable Tray Firewall Barriers – Material Selection & Technical. This article is about Material Selection & Technical Specification of Cable Tray Firewall.

Key Takeaways

Cable tray firewalls are blocked using firestopping materials and barriers to prevent fire and smoke spread while maintaining code compliance.

Purpose of Cable Tray Firewalls

Cable tray firewalls are designed to maintain the fire-resistance rating of walls, floors, and ceilings where electrical cables pass through. Openings around cable trays must be sealed to prevent fire, smoke, and toxic gas from spreading between compartments, ensuring safety in commercial buildings, plants, and substations (NEC 300. 21).

Firestopping Materials

Common materials used for blocking cable tray firewalls include: Fire-rated boards and firestop packs for large openings Intumescent caulks and mastics that expand under heat to seal gaps Fire-resistant mineral wool for packing around cables 3M Fire Barrier Pillows, which are self-contained, intumescent, re-enterable, and provide up to 3 hours of protection These materials must be UL-listed and installed according to manufacturer instructions to ensure proper fire resistance.

Installation Guidelines

Prepare the opening: Ensure floor and wall finishes are complete, and shaft doors are installed. Install backing plates for large openings to support firestop materials. Pack firestop materials around the cable tray, leaving minimal gaps (less than 1 cm^2) and ensuring a minimum packing thickness (e.g., 24 cm for large penetrations).

Seal edges and cover plates: Use square, evenly painted cover plates to close the opening and maintain fire integrity. Follow code requirements: NEC Article 392, NFPA 70, and NEMA VE 1 provide guidance on spacing, grounding, and barrier placement.

Maintenance and Compliance

Firestop systems should be inspected regularly for cracks or voids. Materials must be stored in a cool, dry place and remain traceable from manufacturer to installation. For retrofits or additional cables, re-enterable firestop products like 3M pillows allow safe removal and replacement without compromising fire protection.

By following these practices, cable tray firewalls can effectively block fire and smoke, maintain system integrity, and comply with international safety standards.

Learn the essential steps for cable tray barrier installation, including pre-planning, securing supports, and ensuring compliance with industry standards for safety and organization.

Firestopping a cable tray penetration through an exterior concrete

A cable tray with (11) 500MCM 15kV cables (shown on the ground in the picture) will pass through an outdoor concrete firewall via a 36"x8"x6" deep opening (you can see the penetration cutout in the

Firestopping Requirements for Cable Trays and Wall/Slab Penetrations

Technical guide to firestopping cable tray and slab penetrations in electrical shafts; specifies materials, packing limits, waterstop heights and installation sequence.

System No. C-AJ-4105 Cable tray with cables in solid

System No. C-AJ-4105 Cable tray with cables in solid wall or floor Up to 6 in. by 24 in. steel or aluminum cable tray with max. 45% cable fill F-Rating: 2 h; T-Rating:

Firestopping cable runs

In any installation, properly firestopping breached firewalls and floor-to-floor raceways is necessary. Following proper procedures and using the correct materials to seal these areas are imperative.

Firestop devices and sleeves

Explore our pre-formed firestop sleeves and cast-in devices, designed for easier installations and inspections when firestopping cable and pipe penetrations. One

Fire Protection of Cable Trays

Proper fire protection for cable trays is crucial for maintaining building safety. Find out more with our passive fire protection services.

Cable Tray Penetrations: Problem Solved!

The cable tray industry has managed to sidestep fire stop issues by just saying and doing nothing. The average architect or engineer will spec a cable tray and leave it up to the contractor to install it with

CSD Sealing Systems: Firestops

Multi-cable and Cable-tray Firestop Penetrations CSD FIRSTO® firestops are designed to seal multi-cable and cable tray penetrations of fire-rated walls or floors. FIRSTO® utilizes a metal frame that

Plan, Install & Firestop Cable Penetrations
