Cable tray with right-angled double sloping sides

Overview

Cable trays Cable trays Discover a comprehensive range of high-quality cable trays and cable ladders at ekabel24.com – the reliable choice for safe, organi.

Key Takeaways

A cable tray with right-angled double sloping sides is a specialized open support system designed to guide and protect cables while allowing efficient drainage, ventilation, and easy installation.

Design and Features

Cable trays with right-angled double sloping sides typically feature a V-shaped or trapezoidal profile where both side walls slope outward at right angles from the base. This design provides: Enhanced cable support: The sloping sides help maintain cable alignment and prevent lateral movement. Improved ventilation: Open or perforated bases allow heat dissipation, reducing the risk of overheating for power and communication cables.

Efficient drainage: Sloped sides prevent water accumulation, making them suitable for indoor and outdoor installations, including industrial and chemical environments. Ease of installation: The design allows cables to be laid in a single pass and secured with cable ties or clamps without obstruction.

Materials

These cable trays are manufactured from steel, stainless steel, aluminum, or fiberglass-reinforced plastic (FRP/GRP) depending on the environment and load requirements. Steel and stainless steel provide high mechanical strength and corrosion resistance, while FRP is lightweight, non-conductive, and suitable for wet or chemical-prone areas. ApplicationsRight-angled double sloping side trays are ideal for: Industrial facilities: Heavy-duty power and control cables.

Commercial buildings: Structured cabling and communication networks. Outdoor or corrosive environments: Chemical plants, offshore installations, or areas exposed to moisture. Specialized routing: Where cable separation, drainage, or airflow is critical.

Installation Considerations

Mounting: Can be installed on ceilings, walls, or floors using cantilever brackets, threaded rods, or ceiling suspension systems. Support spacing: Determined by cable weight, tray width, and material; standard support systems comply with DIN EN 61537 and other regional standards. Accessories: Couplers, bends, T-pieces, and end closures are available to maintain continuous cable routing and structural integrity.

Advantages

Reduces fire load and improves safety by keeping cables organized. Simplifies maintenance and future expansion due to open design. Provides high load-bearing capacity while maintaining flexibility in routing.

Compatible with standard cable support systems and accessories for integrated installations. In summary, a cable tray with right-angled double sloping sides is a versatile and robust solution for structured cable management, offering superior support, ventilation, and adaptability for a wide range of industrial, commercial, and outdoor applications.

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Cable Trays, Cable Management Trays | RS

These trays are designed to hold and support various types of cables, including power cables, data cables, and communication cables. The cables are placed inside the trays and can be easily routed

Cable Trays | Cable Management Trays

Ladder Cable Tray: Ladder cable trays have a ladder-like design with horizontal side rails connected by rungs. The rungs provide support for cables and allow easy access for maintenance.

Guide to cable support systems

The mesh cable trays are suitable for the installation of power cables and cables in various areas of application. The grid spacings mean that cables can be inserted and run out in various directions.

Cable Tray

With the RS 60 cable tray installation system, we offer you the last installation type of the standard support construction, so that you can implement all installations required in the building project with

Cable Trays | McMaster-Carr

Choose from our selection of cable trays, including over 850 products in a wide range of styles and sizes. Same and Next Day Delivery.

Cable Tray and Reels | Wire and Cable Management

From heavy power cable pathways on oil drilling platforms to data center cabling, explore the cable tray that''s strong yet easy to install. Fast installation with dependable support.

Tubing Trays | McMaster-Carr

These are the most corrosion-resistant tray systems we offer for routing cable and hose in configurations such as curves, slopes, and tees. Cut, bend, and connect the wire mesh trays.
