Cable trays laid across floors

Overview

Choose from our selection of floor cable trays, including multichannel interlocking cable ramps, drop-over interlocking cable ramps, and more. Same and Next Day Delivery.

Key Takeaways

Cable trays can be safely and efficiently installed across floors using walkable trunking, interlocking ramps, or underfloor systems to protect cables and prevent tripping hazards.

Types of Floor Cable Trays

Walkable Floor Trunking: Designed for industrial environments, walkable trunking supports high foot traffic and heavy loads. The covers are slip-resistant (R10 according to DIN 51130) and can be installed quickly with minimal components. These systems allow flexible routing and are suitable for assembly lines, robot cells, and machine parks, providing both durability and safety.

Interlocking Cable Ramps: These ramps are ideal for areas with pedestrian or light equipment traffic. They feature multiple channels to separate different types of cables, a textured surface for traction, and snap-together sections to span long distances. ADA-compliant ramps provide gradual inclines for wheelchairs and carts, reducing tripping hazards while protecting cables from damage.

Underfloor Cable Trays: Installed beneath raised access floors, these trays provide a hidden, organized pathway for power and data cables. They are commonly used in offices, data centers, and trading floors where frequent layout changes occur. Underfloor trays allow easy access by lifting floor panels, maintaining a clean aesthetic and enabling future expansion without major disruption.

Installation Considerations

Load and Traffic: Choose walkable or reinforced trays in areas with heavy foot or equipment traffic. Accessibility: Ensure trays are accessible for maintenance, repairs, or adding new cables. Underfloor systems allow easy access by lifting panels, while ramps can be opened via hinged covers.

Safety: Use slip-resistant covers and maintain clear pathways to prevent tripping. Interlocking ramps and embossed walkable covers enhance safety. Cable Separation: Multi-channel trays or dividers help organize different cable types, reducing interference and simplifying maintenance.

Compliance: Ensure systems meet relevant standards for load-bearing, slip resistance, and ADA accessibility where applicable.

Advantages

Protects cables from physical damage and wear. Reduces tripping hazards in high-traffic areas. Provides flexibility for future cable additions or layout changes.

Maintains a clean and professional appearance in offices or industrial spaces. Supports high-density installations in data centers and trading floors. By selecting the appropriate floor cable tray system—walkable trunking, interlocking ramps, or underfloor trays—you can ensure safe, organized, and accessible cable management across floors in both industrial and office environments.

Best practices: Use raised floor systems designed for plenum use. Maintain clear pathways for airflow and cable routing. Keep cabling accessible for inspection and future changes.

Access flooring cable tray systems.

Designed, patented and engineered with innovative features and benefits that provide extremely efficient cable management while significantly lowering your life-cycle costs, the ACT/FloorFlex System is the

Cable Trough | Safe & Secure Cable Protection

HAURATON drainage channels have been cleverly adapted with the inclusion of solid covers and cable trays as a floor-laid cable routing system to carry cabling,

Underfloor Cable Management Best Practices

All cables should be supported in cable tray that is run overhead, above the equipment or under the raised floor. This paper addresses the routing of cable pathway beneath a raised floor to maintain

Best practices for underfloor cable management

All cables should be supported in cable tray that is run overhead, above the equipment or under the raised floor. This paper addresses the routing of cable pathway beneath a raised floor to maintain

Cable management

HAURATON drainage channels have been cleverly adapted with the inclusion of solid covers and cable trays as a floor-laid cable routing system to carry cabling,

Underfloor Trunking | Discreet Cable Management | CEF

Underfloor trunking provides a neat and organised solution for routing cables in offices, retail spaces, and commercial environments. Designed to be installed beneath floors, it keeps cables hidden while

Cable Tray Systems: Requirements and Best Practices

Comprehensive guide to cable tray systems requirements: tray types, materials, loading, supports, bonding, routing, and best practices for safe electrical cable management.

Cable Tray Installation

Learn everything about cable tray installation with our complete guide. Discover types, steps, and safety tips for efficient electrical cable management.
