

Coupler-type cable trays

Overview

Cable trays for industrial and marine use. Includes distribution trays, cable routes and NATO-type models. Request a quote directly via our webshop.

Key Takeaways

A Type-Coupler for cable trays is a hardware component used to securely join two sections of a cable tray, ensuring continuous support and organized cable routing.

Function and Purpose

Cable tray couplers are essential components in cable management systems. They connect multiple cable tray sections to create a continuous pathway for electrical or data cables, preventing gaps that could lead to cable damage or entanglement. Couplers also enhance structural stability and allow for flexible cable routing, making installation easier and more cost-effective.

Types of Couplers

Coupler Plates: Flat metal plates that join two tray sections side by side. They are available in various sizes, such as 75 x 200 mm, and can be made from materials like GI (galvanized iron) or MS (mild steel).

L-

Type Side Couplers: Designed to connect trays at corners or angles, providing additional support for directional changes. **Fish Plates and Hardware Couplers:** Include bolts, nuts, and other fastening hardware to ensure a secure and rust-free connection.

Benefits

Continuous Cable Pathway: Ensures cables are supported along the entire run, reducing stress and wear. Easy Installation: Pre-engineered couplers simplify assembly and reduce labor time. Durability: High tensile strength and rust-resistant finishes extend the lifespan of the cable tray system.

Cost-

Effective: Reduces the need for additional support structures and minimizes cable damage. Applications Type-Couplers are widely used in industrial, commercial, and infrastructure projects where organized cable management is critical. They are compatible with perforated, ladder, and channel-type cable trays, making them versatile for different installation environments.

Sourcing

Coupler plates and Type-Couplers are available from manufacturers and suppliers across India, including Pune and Vasai, with options for custom sizes and specifications to meet project requirements. In summary, a Type-Coupler is a vital component for joining cable tray sections securely, maintaining cable organization, and ensuring long-term durability in electrical installations.
