Different Specifications of Cable Tray Funnel Models

Overview

Ventilated Cable Ladder is a prefabricated structure consisting of a ventilated bottom within integral or separate longitudinal siderails, with no openings exceeding 4 in. in a longitudinal direction.

Key Takeaways

Funnel-shaped cable trays are specialized cable management systems designed to guide cables through transitions or constricted areas, available in various materials, sizes, and configurations to meet load and environmental requirements. OverviewFunnel-shaped cable trays are typically used to direct cables from a wide entry point to a narrower exit, or to manage cable transitions between different tray types or equipment. They are often fabricated from steel, stainless steel, aluminum, or fiberglass, depending on environmental conditions and load requirements.

These trays are designed to maintain mechanical support, strain relief, and proper airflow to prevent overheating.

Materials and Finishes

Galvanized Steel: Offers corrosion resistance for indoor and outdoor applications. Stainless Steel: Suitable for harsh or chemical environments. Aluminum: Lightweight and corrosion-resistant, ideal for industrial or commercial installations.

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Fiberglass: Non-conductive and corrosion-resistant, used for light wiring or control cables. Finishes: Zinc coating, epoxy coating, or powder coating for additional protection. Dimensions and Load CapacityFunnel-shaped trays are available in various widths and depths, often matching standard ladder or channel tray sizes for compatibility.

Load capacity depends on tray material, thickness, and support span. Common designations follow NEMA VE-1 standards for metal cable trays, ensuring structural integrity and safety. Widths typically range from 100 mm to 600 mm, with depths from 50 mm to 150 mm, but custom sizes are also available.

Models and ConfigurationsLadder-Type Funnel Trays: Feature side rails with rungs for airflow and easy cable support, suitable for heavy power cables.

Solid-

Bottom Funnel Trays: Provide full support for sensitive or small-diameter cables, preventing dust or debris accumulation. Ventilated or Perforated Funnel Trays: Allow heat dissipation and reduce weight, ideal for data centers or telecommunication rooms. Custom Fittings: Horizontal and vertical elbows, reducers, tees, and branches can be integrated to create funnel transitions.

Standards and ComplianceFunnel-shaped cable trays are designed to comply with UL, NEMA, and IEC standards, ensuring safety, fire resistance, and mechanical performance.

C

E marking may apply for European installations, and trays are often tested for load, corrosion, and electrical insulation.

Applications

Transitioning cables from wide distribution trays to narrower equipment entry points. Managing high-density cable runs in data centers, industrial plants, or commercial buildings. Integrating with ladder, channel, or wire mesh trays for complex routing.

Supporting power, control, instrumentation, and communication cables while maintaining airflow and strain relief. Funnel-shaped cable trays provide a flexible, safe, and efficient solution for guiding cables through constrained or complex pathways, with multiple material, size, and configuration options to suit diverse industrial and commercial applications.

GUIDE CABLE TRAYS TECHNICAL

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Product Catalogue Cable Management Solutions

Ventilated Cable Ladder is a prefabricated structure consisting of a ventilated bottom within integral or separate longitudinal siderails, with no openings exceeding 4 in. in a longitudinal direction.

Cable Tray Technical Guide A practical guide to product selection and ...

In designing supports for a cable tray system, consideration should be given to the loads associated with future cable additions and any additional loading that may be applied to the cable tray system (e.g.,

CABLE TRAY SYSTEMS GUIDE

The design and cost of the cable tray is greatly affected by this designation. In order to determine the most appropriate and economical system, a class should be selected that reflects the actual total

Product Specifications: CABLE TRAY

FDG CABLE TRAY ng; Power, Data, and Audio Visual. A quick and easy system to install without the need for specialised tools or equipment, makes it a first choice for Comm solution that works for your

Cable Tray Specifications and Accessories

This document provides specifications for perforated and solid cable tray systems including: - Straight sections that come in various heights, bottom types, return flange types, materials, thicknesses, and

Download Cable Tray Resources | ApexTray Official Site

Visit our Download Center to access ''Download Cable Tray'' resources, including detailed manuals, CAD files, and specifications. Get all the essential tools and documents you need for your cable

Resources for Cable tray and ladder systems

Our cable tray design considerations guide details key factors to consider when designing cable tray systems for industrial and commercial applications. Browse or download the cable tray catalog for

LEGRAND CABLE TRAYS TECHNICAL GUIDE

Not all cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our

CABLE TRAY

We manufacture a wide range of products capable of providing the characteristics which respond to the proposed application, along with quality of assembly, speed of installation, and cost-saving cable trays.

Cable tray

In the electrical wiring of buildings, a cable tray system is used to support insulated electrical cables used for power distribution, control, and communication.

Cable Trays Selection Guide: Types, Features, Applications

Cable trays are components of support systems for power and communications cables and wires. A cable tray system supports and protects both power and signal cables and facilitates upgrading,

Cable tray outlet funnel buy online

Tee funnel cable tray Outlet funnels for cable trays are formed parts for safe, organized, and material-friendly cable routing. They create a defined transition from the cable tray downward, to the side, or

Cable Tray Technical Guide A practical guide to product selection and ...

A practical guide to product selection and installation This guide for engineers and installers has been developed by ABB as a practical reference regarding cable tray characteristics, installation, and

Cable Tray and Trunking Overview | PDF | Length | Sheet Metal

The document discusses different types of cable containment systems including cable trays, cable ladders, and cable trunking. It provides details on the components of each system including straight

Cable Tray Types & Installation Guide | Enagalxy

Learn cable tray types, uses, and installation basics to support safe, efficient electrical and water supply pipe systems in your project.

Cable Tray Specification Guide | Types, Materials, Sizes

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Cable Tray Specification In the realm of infrastructure development, the efficient management of electrical conduits plays a pivotal role. This section delves into the intricacies of selecting and

Cable Tray

Cable Tray Cable trays are mechanical support systems that provide a rigid structural system for electrical cables, raceways, and insulated conductors used for electric power distribution, control,
