Disadvantages of surges in distribution boxes

Overview

A sudden electrical surge injects excess energy into a system faster than the insulation or internal components can withstand. In some cases, fire hazards can develop due to arcing. Power surges and voltage spikes are sudden increases in electrical voltage that can damage electronics and critical systems. Surge Protection Devices (SPD) provide overvoltage protection, safeguarding sensitive electronics, industrial automation equipment, and data centers from transient. The drawbacks are real, and this is where many articles get too optimistic. The biggest. What happens if the distribution box is not protected?

Surge protectors are the first line of defense. Their role in safety and power surge management is very important for homes and businesses. LEEYEE provides industrial-grade protection solutions with superior SPD parameters to prevent catastrophic electrical failures.
