Distribution box switch burned black

Overview

The most common cause is an overloaded circuit. Factories that add machines over the years without upgrading the lv distribution board push breakers past their rated capacity. A 63A breaker feeding a steady 80A load will trip the moment all equipment runs at once. A distribution box that fails without warning stops production and costs real money. Your. When the main switch is turned off or burnt out, none of the panel will have any power supply but could still be live! With an RCD or GFCI Main Switch, there may be some power cuts before it burns out. This is likely because of. The photo above shows an issue which has caused a burnt switch and could easily have led to a BURNT ELECTRICAL BOX / consumer unit had we not intervened at this stage. Luckily, there are many things you can do to. Have you ever noticed a blackened outlet or seen scorch marks on the wall around it?

While it may be tempting to ignore these signs, they signal a much deeper problem.
