Factory Intelligent Power Distribution Cabinet Case Study

Overview

Complete case study — how DRAmetal delivered 300 power distribution cabinets for a data center power program. Cold-rolled steel construction, dead-front safety, isolated busbar chambers, compartmentalized breaker and cable zones, IEC 61439 clearances, powder-coated, 12-week lead. The EK series power distribution cabinet delivers centralized and secure power management, ensuring consistent energy distribution while preventing overloads and operational downtime. It ensures that the circuit can quickly cut off power in the event of overload, short circuit or leakage through built-in circuit breakers, overvoltage and undervoltage protection modules. A data center infrastructure provider in the United States approached Qmax Systems to design and manufacture an intelligent, high-power rack Power Distribution Unit (PDU) for deployment across its data center facilities.
