Fiber Optic Protective Heat Shrink Tubing Price

Overview

The fiber optic heat shrink tubes is tight and the metal support maintains its strength to prevent the fiber from breaking at the splice.

Key Takeaways

Heat shrink fiber optic protective tubing typically ranges from $0. 50 to $3 per piece, depending on size, material, and quantity.

Overview

Heat shrink fiber optic tubing, also known as fiber splice tubes, fusion protection tubes, or splice protection sleeves, is designed to protect optical fibers during splicing and installation. These tubes are usually made of cross-linked polyolefin, hot melt material, and reinforced with stainless steel rods to maintain optical transmission and provide environmental protection. They are available in single fiber or ribbon fiber configurations, with customizable colors and lengths for easier identification and installation.

Price RangeSmall-scale retail purchases (e.g., Amazon or Fiberinthebox) typically cost $0. 50 to $2 per tube, depending on length and fiber type. Bulk or wholesale orders (e.g., Alibaba suppliers) can reduce the cost to $0.

30 to $1. 50 per tube, especially for large quantities or customized designs. Additional factors affecting price include material quality, flame retardancy, shrink ratio, and environmental resistance (temperature, moisture, UV exposure),.

Purchasing Tips

Check compatibility with your fiber type (single-mode vs. multi-mode, ribbon vs. single fiber). Consider environmental conditions: choose tubing with moisture resistance and temperature tolerance if used outdoors or in harsh environments. Bulk orders often provide significant savings, especially for large-scale network installations.

Supplier verification: reputable suppliers provide clear specifications, quality certifications, and return policies. By considering these factors, you can select heat shrink fiber optic tubing that balances cost, durability, and performance for your specific networking or splicing needs.
