Fiber optic light on wireless router is red

Overview

Modem & Router Lights Explained | BroadbandSearchA red or blinking PON light almost always indicates a physical issue with the fiber cable: a bend, a break.

Key Takeaways

A red fiber optic light on your router indicates a loss of signal, meaning your router cannot communicate with your Internet Service Provider (ISP).

Common Causes

Fiber Optic Cable Damage: Physical cuts, bends, or kinks in the fiber optic cable can disrupt the signal and cause the red light to appear. Service Outage: ISP maintenance or local outages can prevent your router from connecting to the internet. Loose or Faulty Connections: Improperly connected cables or damaged connectors can interrupt the signal.

Router or ON

T Malfunction: A defective router or Optical Network Terminal (ONT) may trigger the red light. Power Issues: Insufficient or unstable power supply can prevent the router from functioning properly.

Troubleshooting Steps

Check for ISP Outages: Visit your ISP's website or social media pages to see if there is a known service disruption. Inspect the Fiber Optic Cable: Look for visible damage and ensure the cable is securely connected to the router's WAN/ONT port. Reboot the Router: Turn off the router, unplug it from the power source for 30 seconds, then reconnect and power it on.

Check if the light turns green. Verify Cable Connections: Ensure all cables, including power, LAN, and fiber optic, are firmly connected. Replace any damaged cables.

Test Power Supply: Plug the router into a different outlet or use a surge protector to ensure stable power.

Contact IS

P Support: If the red light persists after these steps, your ISP may need to check the line or replace faulty equipment. By following these steps, you can identify whether the issue is with your equipment, the fiber optic cable, or the ISP, and take appropriate action to restore your internet connection.
