GPON terminal device registered

Overview

After connecting the ONU to the GPON network, the ONU is auto-found by the OLT. You can also set auto authentication for ONUs. An OLT supports two types of registration mode—automatic registration and manual registration. x (x is from 2 to 253), subnet mask 255. 3 Register the Terminal via a web browser. Use admin for. The following sections provide information about ONT registration. You can manually register an ONT by defining an authentication registration rule and specifying the service template for configuring the. To enable the router to communicate with an upstream optical line terminal (OLT), you must correctly configure attributes of the GPON interface connected to the OLT. The OEM GPON S/N is in the format: GPON0012ABCD but TP-Link's web management interface requires it to be a 16-digit hexadecimal. 2) There are multiple services for the user, including Internet service, VOIP service, and IPTV service.

ONT Registrations

You can limit the number of ONTs that can be registered on the PON port by setting a threshold value. If the number of ONTs on the PON port exceeds the threshold value, an alarm is generated.
