How long is the C-shaped steel for cable tray supports

Overview

Tamlex FastConnect 300mm C Shape Support BracketFeatures Suitable for all FastConnect basket tray (excluding 60mm x 60mm) Simple, fast and secure fastening.

Key Takeaways

C-shaped steel supports for cable trays are typically available in standard lengths ranging from 10 to 40 feet, depending on the application and manufacturer. Standard LengthsC-shaped steel, often used as support channels or struts for cable trays, generally follows the same length conventions as the cable trays themselves. According to Eaton's B-Line series and other industry references, standard cable tray lengths are 12, 20, 24, and 30 feet, with some manufacturers offering lengths up to 40 feet for long-span or outdoor installations.

Shorter lengths, such as 10 or 12 feet, are commonly used for indoor installations with frequent support intervals, while longer lengths are used to reduce the number of supports in outdoor or long-span applications.

Support Considerations

Support Span: The distance between supports affects the required strength of the C-shaped steel. Short-span trays are typically supported every 6–8 feet, intermediate spans every 10–12 feet, and long spans up to 20 feet or more. Splice Plates: When connecting multiple lengths, splice plates are used, and it is recommended to have only one splice plate per support span to maintain structural integrity.

Load Capacity: The steel support must accommodate both the weight of the cables and environmental loads such as wind, snow, or ice. Standards ComplianceC-shaped steel supports and cable trays should comply with IEC 61537 or BS EN 61537 standards, ensuring safety, durability, and compatibility with cable management systems. These standards guide the design, material selection, and installation practices for cable tray supports.

Practical Recommendation

When selecting C-shaped steel for cable tray supports: Match the steel length to the support span to minimize the number of splices. Consider environmental conditions and load requirements. Use standard lengths (10–40 feet) to simplify procurement and installation.

By following these guidelines, the C-shaped steel supports will provide reliable mechanical support for cable trays in both indoor and outdoor installations.
