

How many meters should the overhead optical cable be spaced

Overview

Overhead Fiber Optic Cable Installation: Requirements & 2 Key TypesIn the realm of optical fiber deployment, overhead installation remains a critical metho.

Key Takeaways

The span of an overhead optical cable typically ranges from 50 meters to over 700 meters, depending on cable type, environmental conditions, and support structures.

Typical Span Ranges

Short-span cables: For urban or densely built areas, pole spacing is usually 25–50 meters, often using wooden or concrete poles of 10–15 meters in height to maintain proper sag and tension.

Medium-span cables: ADSS-S type cables can span 50–200 meters between poles, suitable for suburban or rural installations where longer distances are feasible.

Long-span cables: ADSS-D or reinforced cables can cover 100–700 meters, especially in open terrain or when using steel lattice structures, allowing for extended distances between supports while maintaining mechanical stability.

Factors Affecting Span Length

Cable Type: Dielectric cables (ADSS) without metallic components allow longer spans, while standard aerial cables may require shorter spans.

Environmental Conditions: Ice loading, wind speed, and temperature fluctuations influence maximum allowable span. Extreme conditions may reduce span to maintain safety and prevent excessive sag.

Support Structures: Pole height, material, and reinforcement (e.g., guy wires, steel poles) determine feasible span lengths. Concrete or steel poles allow longer spans than wooden poles. Sag and Tension Control: Proper sag is maintained at 1-2% of span length to prevent fiber strain, and tension is set to a fraction of the cable's breaking strength to accommodate thermal expansion.

Practical Example

A 288-fiber ADSS cable installed on 50-meter poles may use a galvanized steel messenger wire with tension set at 15-20% of its breaking strength, maintaining a sag of 0.5-1 meter for stability. For long-span ADSS-D cables, spans of 500-700 meters are achievable with reinforced supports and careful tensioning.

In summary, overhead optical cable spans are highly variable, ranging from 50 meters in urban short-span setups to over 700 meters in long-span rural or reinforced installations, with the exact span determined by cable design, environmental factors, and support structure specifications.

Overhead Fiber Optic Cable Installation: Requirements & 2 Key Types

In the realm of optical fiber deployment, overhead installation remains a critical method for rapid and cost-effective network expansion. As a leading provider of fiber optic solutions, we

Overhead Optical Cable Construction Guidelines

The overhead optical cable is reserved for one place for every 10 poles, with a reserved amount of 10 meters per place and a coil diameter of 60cm. 20 meters are reserved at each end of...

Overhead Fiber Optic Cable: Installation Method and Requirement

1.The distance between poles of overhead lines is 25-40 meters in the urban area, 40-50 meters in the suburbs, and no more than 67 meters in other sections.

2.Overhead fiber optic cable

How Many Different Method To Install Fiber Optical Cable?

The overhead of optical cable means that the optical cable relies on supports such as poles to suspend the optical cable in a space of 3.0 meters to 8.0 meters above the ground.

How To Set Up Overhead Fiber Optic Cable? — ZMS Cable

In order to make the fiber optic cable in the event of a break and then splice, should be left at every hundred meters with a certain margin, the margin length is generally 5% to 10%.

FOA Standard For Installing Fiber Optic Cable Plants

Since building systems may require many types of cables, both fiber and copper, these cables should be separated to protect the fiber cables from damage and all cables marked properly.

What are the Requirements for Aerial Fiber Cable Laying?

The optical cable should not be laid along the wall in the form of hook; if it is unavoidable, the optical cable should be protected by a sleeve. When the optical cable is laid along the suspension line
