How much does a cable tray cost per unit at a factory

Overview

Discover the 2026 cost breakdown for cable trays compared to conduit and wire mesh. Compare material prices, labor savings, and performance to find your best value.

Key Takeaways

Cable tray prices in a factory typically range from $2 to $25 per meter, depending on material, type, and installation requirements.

Material and Type Considerations

The cost of cable trays varies significantly based on the material and type chosen: Pre-Galvanized Steel (PG): Most affordable, suitable for dry, indoor factory areas, offering basic corrosion protection.

Hot-

Dip Galvanized Steel (HDG): More expensive due to thicker zinc coating, ideal for outdoor or high-humidity factory environments. Aluminum: Lightweight and corrosion-resistant, slightly higher cost but reduces the need for heavy support structures. Stainless Steel: Highest cost, used in hygienic or highly corrosive environments, such as food processing or chemical plants.

Tray types also affect pricing: ladder trays are more expensive but handle heavy loads and heat better, perforated trays are mid-range, and wire mesh trays are cheaper and faster to install. Cost per MeterFor industrial applications, the average price per meter ranges from $2 to $25, influenced by material, tray type, size, and surface finish. Bulk orders can reduce per-meter costs, especially for large factory installations.

Installation and Lifecycle Costs

A reasonable price should consider total cost of ownership, not just material cost: Labor: Skilled installation can exceed material costs; wire mesh trays often reduce installation time. Maintenance: Trays that allow easy access and resist corrosion reduce long-term expenses. Durability: Choosing slightly higher upfront costs for HDG or stainless steel can prevent early replacement and downtime.

Practical Guidance

For a typical factory: Indoor, dry areas: Pre-galvanized steel or aluminum trays at $2–$10 per meter are reasonable. Outdoor or corrosive environments: Hot-dip galvanized or stainless steel trays at $10–$25 per meter provide better long-term value. High-load or heat-intensive areas: Ladder trays, though more expensive, are cost-effective over time due to durability.

Selecting a cable tray should balance material, type, installation ease, and expected lifespan to achieve the most cost-effective solution for the factory setting.
