How to wire the front optical splitter

Overview

Connect the Optical Source: Using an optical (TOSLINK) cable, connect your source device's Optical Out to the splitter's SPDIF Input. Understanding how to properly place and use an optical splitter is essential for optimizing signal quality and ensuring seamless data transmission. This is ideal for sending audio from one source (Blu-ray player, game console, TV, streamer, etc. It can distribute the optical energy transmitted through a single fiber to two or more fibers in a predetermined ratio or combine the optical energy from multiple fibers into one fiber. Splitter Type: Choose a PLC type (uniform splitting) or an FBT type (non-uniform splitting) based on your needs, and confirm wavelength compatibility (e. These devices help you control light signals well.
