Huawei does not require an optical module

Overview

Typical Troubleshooting Cases of Optical Module If not, replace it with a Huawei-certified optical module. If the optical module is installed on a GE port.

Key Takeaways

Huawei networking devices generally require optical modules for fiber-optic connections, and only Huawei-certified modules are fully supported to ensure reliability and service stability.

Role of Optical Modules

Optical modules are photoelectric converters that transform electrical signals into optical signals and vice versa, operating at the physical layer of the OSI model. They are essential for fiber-optic communication, enabling high-speed data transmission between switches, routers, and other network devices. Without optical modules, Huawei switches cannot establish fiber connections, which are critical for data center and enterprise network deployments.

Huawei Certification Requirement

Huawei switches must use Huawei-certified optical modules. Non-certified modules may not meet Huawei's specifications, potentially causing transmission errors, service instability, or port shutdowns. Even if a non-certified module is physically compatible, the switch may generate alarms or disable the port to prevent network issues.

Huawei provides commands, such as transceiver phony-alarm-disable, to suppress alarms for older or early-delivered modules, but full functionality is only guaranteed with certified modules.

Alternatives and Limitations

While Huawei devices can operate on copper Ethernet ports without optical modules, any fiber-optic port requires a compatible optical module. Therefore, the statement that Huawei "does not need optical modules" is only partially correct: it applies to copper-based connections but not to fiber-optic connections, which are common in high-speed or long-distance networking scenarios.

Conclusion

Huawei optical modules are not optional for fiber-optic connectivity. Using certified modules ensures network reliability, compliance with specifications, and avoidance of alarms or port failures. For copper connections, optical modules are unnecessary, but for any fiber deployment, Huawei-certified optical modules are required.

Cause 1: The optical module is not a Huawei-customized optical module. If this optical module was delivered from Huawei early. If this optical module was delivered from Huawei earlier,

How Huawei CE & S Series Switches Handle Non-Certified Optical

Huawei CE and S series switches both incorporate an optical module authentication mechanism. On S series switches, authentication is strict and alarm notifications are more ...

8 Pluggable Modules for Interfaces

Unlike optical modules, copper modules do not perform electrical-optical conversion. When two optical interfaces have copper modules installed, the interfaces can be connected using a copper cable.

huawei optical module | huawei networking products

Huawei switches must use Huawei-certified optical modules. Non-Huawei-certified optical modules cannot ensure transmission reliability and may affect service stability.

Troubleshooting for Optical Modules on Huawei Switch

The type of optical modules used on the two ports is not restricted. For example, a port with an XFP optical module can communicate with a port with an SFP+ optical module, ...

Huawei 40G QSFP Switch Guide: CE6800 & CE12800 Specs

Compare Huawei CloudEngine 40G switches (CE6800, CE12800), QSFP+ module compatibility (SR4/LR4), and deployment guidance for AI-ready Ethernet fabrics.

Overview of 400G Optical Modules

The primary role of 400G optical modules is to increase data throughput, maximizing bandwidth and port density in data centers. Future

S5735-S48PN4XE-V2

Indicators and Buttons The S5735-S48PN4XE-V2 has similar indicators to those on the S5735-S48U4XE-V2. For details, see the S5735-S48U4XE-V2.

What Is Cyclic Redundancy Check? How to Fix CRC Errors?

For example, the connected twisted pair or optical fiber is faulty, or the optical module on the interface does not work properly. In this case, replace the interface, optical module, or cable, and

Why are Nvidia, Google, and Huawei all developing vertical power

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Even Huawei is paying attention to this technology; Huawei has a patent application for an invention related to a "chip vertical power supply system," which aims to provide a design scheme
