# Inverter to Distribution Box Cable Selection

## Overview

Always use pure stranded copper cable. CCA (Copper-Clad Aluminum) cable is cheaper but has approximately 40% higher resistance than pure copper. The AC-side connection of an inverter is a critical part of installation and commissioning. Correct selection and installation of AC cables and terminals greatly affect plant safety and stability, as well as capital and O&M costs and overall profitability. This article describes inverter AC. Cable selection The correct cable can only be selected once you know the currents in a system. The below list shows an example of what cable size belongs to these currents, providing that the cable. An inverter is a device designed to convert DC power absorbed by solar panels into AC power used to power the necessary electronic devices. With a variety of inverter types available following the continuous development of inverter innovation, Joeyoung inverter manufacturers can be the best choice.
