Is the indoor pigtail light red or green

Overview

What Is a Pigtail Light Switch and How Do You Wire One?

In a standard single-pole switch installation, you will typically identify a bundle of black wires (.

Key Takeaways

Indoor LED pigtail lights can be either red or green, depending on the selected model and application.

LE

D indicator pigtail lights are versatile and come in a variety of colors, including red and green, to suit different signaling or status purposes in appliances, machinery, and control panels. The color is not fixed; when purchasing or installing a pigtail light, you can choose the desired color based on your application requirements, such as red for warnings or green for normal operation.

Color Options and Selection

Red LE

D Pigtail Lights: Often used to indicate warnings, malfunctions, or active status in devices like coffee machines, water heaters, or industrial equipment.

Green LE

D Pigtail Lights: Typically used to indicate normal operation, power-on status, or safe conditions. Other Colors: Some models also offer yellow, blue, or dual-color options for more complex signaling needs.

Installation Notes

Pigtail lights are designed for easy connection, often with pre-wired, color-coded leads that simplify installation. The choice of color does not affect the wiring method, but it is important to select the correct voltage and size for your application. Always ensure the power is turned off before installation to maintain safety.

In summary, the indoor pigtail light can be red or green, and the selection depends on the intended signaling function and the specific LED model you choose.
