Is there no white version of 24-core fiber optic cable

Overview

The SZ-stranded, loose tube design isolates fibers from installation and environmental rigors and allows for easy mid-span access.

Key Takeaways

A white 24-core fiber optic cable is not standard, but custom white jackets can typically be requested from manufacturers. Standard Color Coding24-core fiber optic cables usually follow the TIA/EIA-598C color code, where fibers are grouped in tubes with colors such as blue, orange, green, brown, gray, and white. The outer jacket of standard single-mode cables is typically yellow, while multimode cables often use aqua or other colors like erika violet for differentiation.

White is not a standard jacket color for 24-core cables, so off-the-shelf options are uncommon.

Customization Options

Manufacturers like Huadong Cable Group and other suppliers allow custom cable designs, including jacket color, fiber count, and type. By contacting the manufacturer directly, you can request a white outer jacket for a 24-core cable. This is particularly useful for installations where aesthetics or color-coding consistency is important, such as in office ceilings, data centers, or visible conduits.

Considerations

Identification: Even with a white jacket, internal fiber color coding remains standard to ensure proper identification and splicing. Cost and Lead Time: Custom colors may increase cost and require longer manufacturing lead times. Application: White jackets are often chosen for indoor installations where blending with walls or ceilings is desired, but they may not be suitable for outdoor or direct-burial applications due to UV exposure or environmental durability requirements.

In conclusion, while white 24-core fiber optic cables are not standard, they can be produced through custom orders, ensuring both functional performance and aesthetic requirements are met.
