# Namibian Hot Aisle Rack-Mounted System

## Overview

Hot aisle containment with raised flooring, dual sliding doors, and vinyl Rack Hat between the ceiling and cabinets. Sliding door configuration accommodates high-traffic aisles without swing clearance requirements. The installation of a 'chimney' is. Hot Aisle Containment dramatically boosts Data Centre cooling efficiency by separating hot and cold airflow, helping organisations reduce and manage energy costs and improve operational performance. By preventing hot server exhaust air from mixing with cold supply air, it enhances cooling. Ardmac have developed a range of Ground Supported (GS) and Ceiling Supported (CS) assemblies catering to an array of different modular clean rooms and off-site construction industry requirements including data centre design and data centre construction. Aisle width, rack height, row length and equipment movement clearances surveyed accurately. The HAC system directs the upward airflow to an AC return system such as a drop-ceiling void.
