New Zealand AI Server 400G

Overview

AI servers accelerate model training and real-time inference, delivering powerful computing with CPUs, GPUs, and specialized AI accelerators.

Key Takeaways

High-performance AI servers in New Zealand now support 400G Ethernet, enabling scalable AI clusters with advanced GPU and CPU configurations.

AI Server Platforms in New Zealand

Several vendors provide AI-optimized servers capable of handling 400G networking for demanding AI workloads: DiGiCOR offers AI servers designed for deep learning, machine learning, and HPC workloads. Their platforms focus on GPU-CPU alignment, memory optimization, and high stability for sustained AI operations, suitable for both training and inference tasks.

HP

E New Zealand provides enterprise-grade AI servers, including configurations with eight NVIDIA Blackwell Ultra (HGX B300) GPUs or AMD Instinct GPUs. These servers are engineered for large-scale AI model training, tuning, and inference, with flexibility to integrate into hybrid cloud or sovereign AI facilities.

D Pensando Pollara 400 AI NIC-ready servers combine AMD EPYC CPUs, AMD Instinct GPUs, and the Pollara 400 fully programmable 400G Ethernet NIC, enabling high-throughput AI networking for both front-end and back-end workloads. These servers allow scalable AI clusters and can be updated over time without hardware replacement. 400G Networking InfrastructureAsterfusion CX-N series switches support 400G ports and are ideal for connecting GPU servers in AI clusters.

A single 32x400G switch can connect small-scale clusters, while larger deployments use modular CLOS fabrics for optimal GPU resource efficiency. These switches support RoCEv2 and EVPN-multihoming, ensuring low-latency, lossless networks critical for AI training and inference.

Local AI Data Center Context

New Zealand is actively expanding its AI infrastructure: Datagrid is developing a 78,000 m² AI data center near Invercargill, designed to support energy-intensive AI workloads. Amazon Web Services is investing NZ$7. 5 billion in a new cluster of data centers in Auckland, highlighting the country's growing role as a hub for AI computing.

These facilities leverage renewable energy and New Zealand's cool climate to support high-density AI servers, including 400G-capable platforms.

Summary

For organizations in New Zealand seeking 400G AI server solutions, options include: DiGiCOR for scalable, GPU-optimized AI servers.

HP

E for enterprise-grade, multi-GPU AI servers with 400G networking readiness.

AM

D Pollara 400 NIC-ready servers for high-throughput, programmable AI networking. Asterfusion 400G switches for low-latency, lossless interconnects in AI clusters. These platforms, combined with New Zealand's emerging AI data centers, provide a robust foundation for high-performance AI workloads, from small-scale research clusters to large multi-node AI factories.
