No response after switching to fiber optic router

Overview

The “low fiber” and “no WAN connection” messages usually mean the signal isn't making it from the street to your modem, which requires the provider's side to check or activate your line. Steps to try now:Power off the fiber modem/router for 2–3 minutes, then power it. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. This guide will walk you through diagnosing and resolving common fiber network issues efficiently. Why Do Fiber Networks Fail?

Despite their robustness, fiber networks can fail due to:. Everything was working fine with this setup up until the switch to fiber. As soon as I. Fiber internet uses fiber optic cables to transmit data at lightning-fast speeds. LAN light isn't on on your ONT, PON is the fibre.
