Optical modules and computing power ETF

Overview

Top Optical Components Stocks and ETFs to BuyDiscover the best Optical Components stocks and ETFs to buy now. Ranked by Danelfin AI based on their probabil.

Key Takeaways

Key ETFs for optical modules and AI computing include the Corgi Lithography & Semiconductor Photonics ETF (EUV) and Tuttle Capital Pure Play Photonics ETF (FOTO), offering targeted exposure to photonics and high-performance computing infrastructure. Overview of Optical Module and Photonics ETFsOptical modules and photonics are critical for AI data centers, high-speed networking, and semiconductor manufacturing.

ET

Fs in this space provide investors with exposure to companies producing optical transceivers, lasers, fiber-optic components, and photonic integrated circuits.

These ET

Fs are often actively managed and focus on the AI infrastructure bottleneck, where high-bandwidth optical connections replace traditional copper-based links. Notable ETFsCorgi Lithography & Semiconductor Photonics ETF (EUV)Actively managed, invests in lithography, semiconductor photonics, optical components, and AI infrastructure technologies. Top holdings include Taiwan Semiconductor Manufacturing (TSM) 10%, ASML Holding (ASML) 8%, Lam Research Corp (LRCX) 5%.

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

Offers broader exposure with around 40 holdings, including extreme ultraviolet lithography, fiber-optic networking, imaging, sensing, and lidar. Annual expense ratio: 0. 35%.

Tuttle Capital Pure Play Photonics ET

F (FOTO)Focuses on pure-play photonics companies, targeting optical technologies for AI data centers. Top holdings include Lumentum Holdings (LITE) 14%, IPG Photonics Corp (IPGP) 12%, Fabrinet (FN) 11%. Smaller, more concentrated portfolio with 16 holdings, emphasizing high-growth optical module companies.

Other Photonics ETFsAdditional ETFs have been filed or launched by REX, Roundhill, KraneShares, Tema, Defiance, and the proposed Aura AI Photonics ETF, which would track the VettaFi AI Photonics Index.

Market Context

The global optical module market is projected to reach $51 billion in 2026, with demand for 800G+ modules exceeding 52 million units, reflecting a 101% year-over-year growth.

ET

Fs in this sector are highly volatile, especially leveraged versions, and are generally suited for short-term tactical trading rather than long-term holding. Active management allows these ETFs to adjust holdings based on AI infrastructure trends, including hyperscale data center deployments and semiconductor manufacturing cycles.

Investment Considerations

Volatility: Leveraged ETFs like those tracking Lumentum (LITE) or Coherent (COHR) can experience significant daily swings. Diversification: EUV provides broader exposure across 40 companies, while FOTO is more concentrated on pure-play photonics. Thematic Focus: Both ETFs target the AI and high-performance computing ecosystem, making them suitable for investors seeking growth from AI infrastructure expansion.

Investors interested in optical modules and computing power ETFs should consider their risk tolerance, investment horizon, and preference for concentrated vs. diversified exposure within the photonics and AI infrastructure sector.
