

Price of Charging Protection Box and Distribution Box

Overview

CP Fusebox EV Charging Boards are designed for safe and reliable electric vehicle (EV) charging in both residential and commercial settings.

Key Takeaways

Charging protection boxes and distribution boxes typically range from \$100 to \$800 or more, depending on size, features, and application. Charging Protection BoxesEV charging protection boxes are designed to safeguard charging stations from overloads, short circuits, and voltage spikes. For example, the ONESTO 6-way EV Charging Protection Box includes surge protection, auto-reclosing circuit breakers, and RCCB for leakage detection, housed in a durable IP65-rated plastic enclosure suitable for outdoor use.

Prices for such pre-configured EV protection boxes generally start around \$150-\$400, depending on the number of ways (6-way, 9-way, etc.) and additional features like pre-wired cables and surge protection.

Distribution Boxes

Standard electrical distribution boxes, including stainless steel double-door enclosures, are used for organizing circuits and protecting electrical components in residential, commercial, or industrial settings. For instance, a stainless steel double-door distribution box suitable for outdoor use with heat dissipation vents and reinforced locks is available on Amazon, with prices typically ranging from \$100 to \$300, depending on size and material quality. EV-specific distribution boards, which manage power from the main supply to multiple EV charging points, are available from specialized suppliers like FuseBox.

Shop and ABB. These boards are designed for robust load management and safety, with prices varying widely based on capacity, number of circuits, and customization.

Small-scale E

V distribution boards may start around \$200–\$500, while larger or industrial-grade boards can exceed \$800.

Factors Affecting Price

Number of circuits or ways: More circuits increase cost. Material and durability: Stainless steel or weatherproof enclosures are more expensive than plastic. Additional features: Surge protection, auto-reclosing breakers, and pre-wired setups add to the price.

Application: Industrial or commercial-grade boxes are priced higher than residential units. In summary, for a typical EV charging setup, a protection box may cost \$150–\$400, while a distribution box can range from \$100 for basic models to over \$800 for industrial-grade EV distribution boards.
