Price of hot-dip galvanized fire-resistant cable trays

Overview

F4: Good quality, factory price, quick response, reliable service. Professionals are responsible for every step of the process to ensure high quality service and quality.

Key Takeaways

Hot-dip galvanized fire-resistant cable trays typically cost between $2 and $25 per meter, depending on material, type, size, and surface finish.

Price Range and Factors

The average cost per meter for hot-dip galvanized (HDG) cable trays ranges from $2 to $25, with the higher end reflecting specialized fire-resistant or heavy-duty designs. Key factors influencing cost include: Material and Coating: HDG steel provides long-term corrosion resistance and durability, making it more expensive than pre-galvanized or powder-coated alternatives. Tray Type: Ladder trays, perforated trays, solid-bottom trays, and welded trays vary in price.

Ladder trays are stronger and cost more, while wire mesh or perforated trays are lighter and more economical. Size and Load Capacity: Wider trays or those designed for heavy cable loads increase material costs. Standard lengths range from 50mm to 600mm, with customization affecting pricing.

Fire-

Resistance Features: Fire-resistant trays comply with national standards and may include additional coatings or materials, slightly increasing the cost. Supplier and Location: Prices vary by manufacturer, region, and shipping costs. China, Vietnam, and India are major production hubs offering competitive pricing, while local procurement in Southeast Asia may reduce delivery times.

Order Quantity: Bulk orders often reduce per-meter costs, while small trial orders may incur extra fees.

Additional Considerations

Delivery Time: Standard sizes are typically delivered within 7–20 days after deposit. Standards Compliance: Ensure trays meet NEMA, UL, CTI, CSA, or ASTM A123 standards for fire resistance and galvanization. Installation Costs: Labor, mounting hardware, and site conditions can add to the total project cost.

Durability: HDG trays are ideal for harsh environments, including outdoor, industrial, and offshore applications, providing long-term protection against corrosion and fire. In summary, for budgeting purposes, expect $2–$25 per meter for hot-dip galvanized fire-resistant cable trays, with the final cost influenced by tray type, size, fire-resistance features, and supplier location. For large-scale projects, contacting manufacturers directly for quotes and bulk pricing is recommended to optimize cost and delivery.
