Reasons why the router s fiber optic light is red

Overview

How to Fix Red Light on My Router How to Fix Red Light on My Router A red light on your router can be a source of frustration and confusion. It often indic.

Key Takeaways

A red fiber optic light on your router indicates a Loss of Signal (LOS), meaning the router is not receiving a proper optical signal from your ISP.

Common Causes

Fiber Optic Cable Damage: Physical cuts, sharp bends, or kinks in the fiber optic cable can disrupt the signal, causing the LOS light to turn red. Service Outage: ISP maintenance, technical issues, or local outages can interrupt the connection, triggering the red light. Loose or Faulty Connections: Improperly connected cables or damaged connectors at the router or ONT can prevent signal transmission.

Router or ON

T Malfunction: Hardware issues, firmware errors, or overheating in the router or Optical Network Terminal can cause the red light. Power Issues: Fluctuations in power supply or a faulty adapter may prevent the router from functioning correctly.

Troubleshooting Steps

Check for ISP Outages: Visit your ISP's website or social media pages to see if there is a known service disruption. Inspect the Fiber Cable: Look for visible damage, ensure the cable is properly seated in the WAN/ONT port, and avoid sharp bends. Reboot the Router/ONT: Power off the device, unplug it for 20–30 seconds, then reconnect and turn it back on.

This often resolves minor glitches. Secure Connections: Verify that all cables, including power, LAN, and fiber, are firmly connected. Reseat connectors gently if needed.

Check for Hardware Issues: If the red light persists, the problem may be internal to the router or ONT, requiring professional inspection or replacement.

When to Contact Your ISP

If the LOS light remains red after checking cables, rebooting, and confirming no local outages, the issue is likely on the line or network side. Contact your ISP for line verification or technician support to restore proper signal. By following these steps, you can often identify whether the red light is due to a simple in-home issue or a broader network problem, helping restore your internet connection efficiently.
