Regulations for the Placement of Secondary Distribution Boxes

Overview

Learn every USPS mailbox requirement for curbside, wall mount, cluster, and locking mailboxes. Covers height, placement, materials, and new construction rules.

Key Takeaways

Secondary distribution boxes must be installed in accessible, safe locations, at recommended heights, with adequate clearance, and using non-combustible materials according to BS 7671 and IEC 61439 standards.

Accessibility and Location

Distribution boards and consumer units must be readily accessible for operation, inspection, testing, and maintenance. They should not be placed in locations requiring ladders, awkward stretching, or removal of stored items, ensuring quick access to reset RCDs or isolate circuits in emergencies (BS 7671: Sections 131. 12 and 513.

1). Outdoor installations must use enclosures with at least IP4X, IP5X, or IP6X protection, unless the equipment is specifically rated for outdoor use.

Height Requirements

For residential installations, the recommended mounting height is 1. 35 to 1. 45 meters above finished floor level, aligning with Part M of the Building Regulations and BS 8300 for wheelchair accessibility.

Industrial installations may have different height and clearance requirements, typically with a maximum width of 1. 5 meters, height of 1. 2 meters, and depth of 0.

5 meters for IP54-rated panels.

Clearance and Working Space

Adequate working space must be provided around the panel to allow safe access to live components.

B

S 7671 specifies sufficient clearance for operation, maintenance, and emergency isolation, ensuring that main isolators are clearly labeled and accessible. Emergency disconnect switches should be installed to allow immediate power interruption if necessary (BS 7671: Sections 132. 9 and 132.

10).

Material and Fire Safety

The 18th Edition Wiring Regulations require consumer units to be made from non-combustible materials, typically metal, to reduce fire risk and contain heat in case of electrical faults. Plastic units are only permissible if enclosed in a fire-rated cabinet or installed in non-domestic locations.

Environmental Considerations

Panels should be installed in areas free from water, excessive dust, and other adverse environmental conditions that could compromise safety or performance. Double insulation and protective covers are required for live parts in metallic distribution boards.

Electrical Compliance

Distribution boxes must be selected according to current-carrying capacity and system load, complying with BS EN 61439 and IEC 60898/60947 standards for protective devices. Proper isolation and switching mechanisms must be provided to disconnect all live conductors simultaneously during maintenance or emergencies. In summary, the latest regulations emphasize safe, accessible, and fire-resistant installation of secondary distribution boxes, with clear guidance on height, clearance, material, and environmental conditions to ensure compliance with BS 7671 and IEC 61439 standards.
