# Samoa Power Distribution Box Specifications

## Overview

This distribution box is equipped with air circuit breakers and fuses for short-circuit protection, as well as contactors and thermal relays.

## Key Takeaways

Samoa power distribution boxes are designed to meet local standards for voltage, safety, and durability, suitable for both residential and industrial applications.

### General Overview

Samoa power distribution boxes, including power strips and PDU units, are manufactured for surface mount, rack mount, and general-purpose applications. They are designed to comply with Samoa standards and agency approvals, ensuring safety and reliability for both standard duty and industrial environments. These units are commonly used in data centers, server rooms, and general electrical distribution.

### Design and Material Standards

Distribution boxes in Samoa are constructed to meet recognized international standards for electrical safety and materials. Components typically conform to standards such as ANSI, NEC, NEMA, ASTM, and AWWA for mechanical and electrical performance. Materials used include stainless steel or corrosion-protected fasteners, and enclosures are designed to withstand environmental factors while maintaining electrical integrity.

C and ductile iron piping for associated distribution lines meet ASTM D1785, NSF Standard 14, and CSA B137. 3 for pressure and temperature ratings up to 140°F.

### Electrical Specifications

Voltage Ratings: Distribution boxes are compatible with low voltage (up to 22 kV) and medium voltage (up to 33 kV) systems, depending on the application. Current Capacity: Units are designed to handle standard residential and industrial loads, with multiple outlet configurations for PDUs and power strips. Safety Features: Compliance with NEC, NESC, and NFPA ensures proper grounding, insulation, and protection against overloads and short circuits.

### Installation and Applications

Substations and Grid Integration: Distribution boxes are used in conjunction with substations such as Fiaga, Fuluasou, Salelologa, and Tanugamanono, supporting both underground and overhead lines. Low Voltage Distribution: Replacement and upgrade projects include 1,220 km of low voltage lines on Upolu and 800 km on Savaii, indicating widespread deployment of distribution boxes across the islands. Data Centers and Industrial Use: Rack-mounted PDUs and multiple outlet power strips are used for server rooms and industrial equipment, providing reliable power distribution and monitoring.

### Compliance and Quality Assurance

Samoa distribution boxes are manufactured to meet agency-approved quality standards, ensuring durability, fire resistance, and operational safety. All components, including gaskets, fasteners, and enclosures, are certified to comply with ANSI-accredited organizations and ASTM testing requirements. In summary, Samoa power distribution boxes are robust, standards-compliant units suitable for a wide range of applications, from residential and commercial to industrial and data center environments, with careful attention to voltage ratings, material quality, and safety compliance.
