Single-mode armored 24-core optical cable

Overview

ALTOS® Loose Tube, Gel-Free Cable 24 F, Single The loose tube gel-free design is fully waterblocked using craft-friendly, water 24F, Single Mode, Armoured.

Key Takeaways

A 24-core armored single-mode optical cable is a durable, high-performance fiber optic cable designed for long-distance, high-bandwidth data transmission with robust protection against environmental and mechanical hazards. Key FeaturesSingle-Mode Fiber: The cable uses single-mode fibers with a core diameter of 9/125µm, allowing only one path of light to travel through each fiber. This design minimizes modal dispersion, enabling high bandwidth and low attenuation over long distances, often up to 80 km without signal regeneration.

24-Core Configuration: The cable contains 24 individual fibers, providing scalability and flexibility for backbone networks, data centers, and enterprise applications. This configuration supports multiple channels for voice, video, and high-speed internet services. Armored Protection: The cable is encased in a steel or corrugated armor layer, which protects the delicate glass fibers from crushing, rodent damage, moisture, and other physical threats.

This makes it suitable for outdoor, direct-burial, and industrial environments. Construction Types: Single-Tube Design: All 24 fibers are housed in a single tube with a single jacket, simplifying installation and cable management.

Multi-

Tube Loose Tube Design: Some variants use multiple loose tubes filled with jelly or gel-free materials, providing additional protection and flexibility for outdoor installations. Durability and Performance: Armored single-mode cables are engineered for high reliability, low splice loss, and consistent performance under harsh environmental conditions. They maintain signal integrity even under temperature fluctuations and mechanical stress.

Applications

Telecommunication Networks: Backbone and long-haul fiber links. Data Centers: High-capacity interconnects and network aggregation. Industrial Networks: Environments with heavy machinery or exposure to physical hazards.

CCT

V and Security Systems: Reliable transmission for video surveillance over long distances.

Summary

A 24-core armored single-mode optical cable combines high bandwidth, long-distance transmission, and mechanical protection, making it ideal for critical network infrastructures. Selection between single-tube and multi-tube designs depends on installation requirements, environmental conditions, and ease of maintenance. These cables are widely used in outdoor, direct-burial, and industrial applications where durability and performance are essential.
