Smart PDU Energy Saving Type

Overview

Smart PDUs offer real-time monitoring and remote control, allowing you to manage power usage efficiently from anywhere. Using low-power standby mode in Smart PDUs helps save energy by powering down non-essential components during low demand. It not only supplies power to IT equipment in data centers, distributes power to various servers and network devices, but also provides remote monitoring, management, and control of power. The power distribution unit (PDU) market is projected to grow exponentially alongside the expansion of the global data center market from 2026 through 2030. With up to 21 intelligent programmable breakers with a rating up to 125 amps, the SMART PDU I- type, with its 1U design, is compact, hot swappable, and built to meet safety standards. Grow your network, not your headaches. This innovative 1U DC distribution unit delivers unparalleled flexibility and control for telecom network operators, tower. Retrofitting telecom cabinets with Smart Power Distribution Units can significantly reduce energy waste and lower electricity bills.
