Specifications of 6-core optical fiber cable for smart buildings in Kyrgyzstan and Bishau

Overview

Belden provides the information and specifications herein on an "ASIS" basis, with no representations or warranties, whether express, statutory or implied.

Key Takeaways

A 6-core optical fiber cable for smart buildings typically features single-mode fibers, armored or LSZH jackets, and is suitable for indoor/outdoor deployment with high durability and reliable data transmission.

Core Features

Fiber Type: Single-mode (ITU-T G. 652D) is preferred for long-distance, low-latency communication, while multimode can be used for shorter indoor links. Number of Fibers: 6 individual optical fibers, each capable of independent bidirectional communication.

Construction: Options include tight-buffered or loose-tube designs. Armored cables with corrugated steel tape provide extra protection for harsh environments, while non-armored LSZH jackets are suitable for indoor use. Outer Diameter: Typically around 5.

8 mm for FTTH/FTTB cables, allowing easy routing in conduits and building risers. Reinforcement: Fiber Reinforced Plastic (FRP) rods and yarn layers enhance tensile strength and durability.

Performance and Applications

Data Transmission: Supports high-speed, low-latency communication for smart building systems, including IP cameras, access control, and building automation. Distance: Single-mode fibers can handle long-distance links exceeding 550 meters, making them suitable for campus or multi-building networks. Deployment: Suitable for Fiber-to-the-Building (FTTB) or Fiber-to-the-Home (FTTH) architectures, connecting building backbones to telecom or ISP networks.

Environmental Suitability: Armored cables are ideal for underground or exposed outdoor installations, while LSZH or FRP-protected cables are safe for indoor use, reducing fire hazards.

Additional Considerations

Scalability: 6-core cables provide redundancy and room for future expansion without the complexity of higher-core-count cables. Compatibility: Works with standard optical transceivers, patch panels, and structured cabling systems used in smart buildings. Regulatory Compliance: Some cables comply with RDSO/SPN/TC/50-2007 Rev.

5. 0 or similar standards, ensuring quality and reliability. For smart building projects in Kyrgyzstan and Bishkek, a single-mode 6-core optical fiber cable with LSZH or armored protection is recommended for both indoor and outdoor installations, providing a balance of durability, performance, and future-proofing for high-speed connectivity.
