Types of electrical distribution boxes in Malta

Overview

Distribution Boxes Distribution Boxes. Read more. Power Distribution & Domestic Consumer Unit – BigMat MaltaThe Marlanvil Surface Distribution Box is desig.

Key Takeaways

Electrical distribution boxes in Malta include Main Distribution Boards, Sub Distribution Boards, Consumer Units, Meter Panels, and specialized panels for industrial or residential use. Main Distribution Board (MDB)The Main Distribution Board serves as the central hub for electricity distribution in a building or facility. It receives power from the utility company and distributes it to sub-distribution boards and branch circuits.

MD

Bs typically include bus bars, MCCBs (Molded Case Circuit Breakers), and support equipment to manage load and prevent overloading. They are used in both residential and industrial settings and can be single-phase or three-phase depending on the building's requirements. Sub Distribution Board (SDB)Sub Distribution Boards are secondary panels that receive power from the MDB and distribute it to specific areas, such as garages, parking lots, or individual floors.

They are commonly used in residential complexes, offices, and industrial facilities.

SD

Bs help localize circuit protection and simplify maintenance.

Consumer Units

Consumer Units are smaller distribution boxes typically used in homes or small offices. They contain circuit breakers or fuses to protect individual circuits, and often include earth leakage devices for safety. Consumer units are designed for easy access and may be mounted on walls with DIN rail systems.

Meter Panels

Meter Panels house the electricity meter and provide a point of connection for the main supply. They are often integrated with consumer units or SDBs and allow for monitoring and billing of electricity usage.

Specialized Panels

Other types of distribution boxes include: Panel Fuse Banks: Panels with multiple fuses for circuit protection. Unitized Panels: Compact panels combining multiple functions. Transfer Switches: Allow switching between main power and backup generators.

Enclosed Switchgear: Industrial-grade panels for high-voltage or high-current applications.

Key Features

Distribution boxes in Malta vary in IP ratings, number of poles, rated current, and mounting types. Many modern boxes use DIN rail mounting and include features like timers, contact breakers, and earth leakage protection to ensure safety and compliance with local electrical standards. These distribution boxes are essential for safe and reliable electricity distribution, protecting circuits from overloads, and providing centralized control for residential, commercial, and industrial electrical systems in Malta.
