Warranty for server rack and enclosure IP65

Overview

Warranty & Guarantees: All Armagard enclosures are protected from liquids and particulate matter and are constructed according to International NEMA standards as well as European IP standards.

Key Takeaways

IP65 server racks and enclosures typically come with manufacturer warranties ranging from 1 to 5 years, covering defects in materials and workmanship, with specific terms depending on the manufacturer and installation environment. General Warranty CoverageIP65-rated server racks and enclosures are designed to protect equipment from dust, water ingress, and harsh environmental conditions. Warranties generally cover: Material defects: Issues with steel, stainless steel, or polycarbonate panels, welds, and gaskets.

Workmanship: Manufacturing defects such as misaligned doors, faulty locks, or improper sealing. Ingress protection: Some manufacturers guarantee that the IP65 rating will be maintained under normal use, ensuring protection against dust and water jets. Typical warranty durations range from 1 to 5 years, depending on the manufacturer and whether the enclosure is used indoors or outdoors.

Extended warranties may be available for additional cost or with proper installation and maintenance.

Manufacturer-

Specific Notes

Armagard 700 Series: Stainless steel IP65 enclosures for wet or washdown environments, often used in food processing or industrial settings. While the website emphasizes durability and corrosion resistance, warranty details are provided upon request, usually covering defects in materials and workmanship.

AZ

E Telecom Outdoor Cabinets: IP65-rated outdoor server racks are individually water-tested and built to withstand rain, dust, and temperature extremes. Warranties typically cover manufacturing defects and water ingress under normal operating conditions, but exact terms should be confirmed with the supplier. Eterna IP-Rated Racks: IP65 enclosures are tested individually for water resistance and built with welded steel and EPDM gaskets.

Warranties generally cover structural integrity and ingress protection, but users should request specific warranty documentation for their region and application.

Considerations for Warranty Validity

Installation: Improper installation, such as incorrect sealing or mounting, may void the warranty. Environmental conditions: Extreme temperatures, chemical exposure, or physical abuse beyond the design specifications may not be covered. Maintenance: Regular inspection of gaskets, locks, and seals is often required to maintain warranty coverage.

Recommendations

Always request the warranty certificate from the manufacturer before purchase. Confirm whether the warranty includes IP65 ingress protection under your specific environmental conditions. Consider extended warranty or service contracts if the enclosure will be used in particularly harsh or remote locations.

By understanding these factors, you can ensure that your IP65 server rack or enclosure is protected against defects and environmental damage, maximizing the lifespan of your critical IT equipment.
