What are some manufacturers of underground temperature measurement optical cables

Overview

EN.SURE Long Range Power Cable DSTS System The Luna EN.SURE Long Range power cable DSTS system is a unique optical fiber-based strain and temperature measu.

Key Takeaways

Key brands for underground temperature measurement optical cables include Rugged Monitoring, AP Sensing, Sumitomo Electric, and Optromix, offering fiber-optic solutions for real-time monitoring of cable temperatures.

Rugged Monitoring

Rugged Monitoring provides fiber-optic sensing technology for continuous, real-time temperature monitoring of power cables, including joints and terminations. Their system integrates IoT sensors, edge devices, and APM software to detect gradual thermal accumulation, hotspots, and insulation degradation. The sensors are immune to electromagnetic interference and designed for harsh, high-voltage environments, enabling predictive maintenance and enhanced network reliability.

P SensingAP Sensing, based in Germany, offers Distributed Temperature Sensing (DTS), Distributed Temperature & Strain Sensing (DTSS), and Distributed Acoustic Sensing (DAS) for underground cables. Their solutions provide thermal profiling, early fault detection, and real-time monitoring. The fiber-optic cables are unaffected by strain or electromagnetic interference, ensuring accurate measurements for dynamic cable rating (RTTR) and machine learning-based event detection.

Sumitomo Electric

Sumitomo Electric's OPTHERMO™ system uses optical fibers embedded in or attached to power cables as distributed temperature sensors. It allows continuous measurement over long distances with high resolution.

Their AOLC

M (Automatic On-Line Cable Monitoring) system monitors insulation conditions in medium-voltage cables without power outages, providing early warning of deterioration and enabling long-distance submarine cable monitoring.

Optromix

Optromix provides Distributed Temperature Sensing (DTS) systems capable of monitoring temperatures along fiber-optic cables up to 100 km in real-time. Their systems, including the DTS 500, DTS 560 Dual Laser, and DTS 1000 Series, are resistant to electromagnetic interference, chemical effects, and corrosion, making them suitable for oil & gas and underground cable applications. They also offer high-frequency monitoring for fast temperature changes.

Summary

These brands represent leading solutions for underground temperature measurement using optical cables, offering technologies that ensure real-time monitoring, high accuracy, and reliability in harsh environments. When selecting a system, consider factors such as distance coverage, environmental resistance, integration with SCADA or APM platforms, and the ability to detect hotspots or thermal anomalies. These solutions are widely used in power distribution networks, industrial facilities, and critical infrastructure to prevent cable failures, optimize load capacity, and extend asset life.

Article Content

EN RE Long Range Power Cable DSTS System

The Luna EN RE Long Range power cable DSTS system is a unique optical fiber-based strain and temperature measurement system designed to monitor underground T&D power cables and

Distributed Temperature Sensing (DTS) | AP Sensing

Distributed Temperature Sensing (DTS) systems provide temperature information for accurate thermal monitoring, fire detection, and condition assessment by utilizing standard fiber optic cables.

Distributed Temperature Sensing

A Distributed Temperature Sensing (DTS) system monitors temperature over long distances or across large surfaces, it could be along submarine or underground power cables. Instead of installing

Sensor cables with state-of-the-art fiber optic sensors | Solifos AG

Solifos'' fiber optic sensor cables are suitable for measure temperatures in harsh environments where other methods are not possible. Uninterrupted monitoring of large infrastructure for increased safety

Distributed Fiber Optic Temperature Sensor

What is a Distributed Fiber Optic Temperature Sensor? Yokogawa''s DTSX product family is engineered with a variety of fiber optic sensing cables that provide continuous temperature sensing for long

Distributed Temperature & Strain Sensing (DTSS)| B-OTDR | AP

Distributed Temperature and Distributed Strain Sensing systems (DTSS) measure temperature or strain along fiber optic cables for comprehensive asset monitoring.

Power Cable

Omnisens Raman DTS interrogators provide temperature monitoring of power cables using multimode optical fiber as the sensor. For many cables, particularly shorter, direct buried cables, this is an ideal

OSENSA Innovations | Fiber Optic Temperature Sensing & Partial ...

Recognized as a leading developer and manufacturer of fiber optic temperature sensing and partial discharge monitoring products, providing solutions for a multitude of industrial applications.

Review of the usage of fiber optic technologies in electrical power ...

Such optical fibers exhibit changes in attenuation depending on the temperature of the fiber optic bundle itself. The temperature distribution can be reconstructed by measuring only a few

Ultimate Guide to Fiber Optic Distribution Box: Types ...

Fiber optic technology has revolutionized the telecommunications industry, enabling faster and more reliable data transmission. One essential component of a fiber optic network is the

Fiber Optic Splitter: How It Works & Types Guide

This guide demystifies fiber optic splitters, explaining their design, operating principles, types, key specifications, and real-world applications.

Fiber Optic Sensor Cables for Advanced Monitoring | AP Sensing

Fiber optic sensor cables are the key enabler for real-time monitoring of temperature, strain, and acoustic signals across diverse and challenging environments. Depending on the application and the

Hybrid Fiber Optic Cables for Harsh Industrial Environments

Standard fiber cables fail in oil & gas, mining, and industrial sites—and the downtime is expensive. Explore hybrid fiber optic cable selection, design specs, and deployment best practices.

Multi-Parameter Optical Monitoring Solution Applied to Underground ...

© 2026 CGWEB NETWORK INFRASTRUCTURE - All rights reserved

This work presents a multi-parameter optical fiber monitoring solution applied to an underground power distribution network. The monitoring system demonstrated herein uses Fiber
