Where to plug in the splitter connector and its price

Overview

When using an audio splitter, it is crucial to plug it into the correct port to ensure the best sound quality.

Key Takeaways

A splitter connector is plugged into the output port of your source device, and prices vary from $5 to $30 depending on type and quality. How to Connect a SplitterAudio Splitters: Plug a 3. 5mm or USB audio splitter into the headphone or audio output port of your device, such as a smartphone, laptop, or audio player.

Then connect multiple headphones or speakers to the splitter to share audio simultaneously.

HDM

I Splitters: Insert the HDMI splitter into the HDMI output port of your source device (TV box, game console, or PC). Connect each display device to the splitter's output ports. The audio signal is transmitted along with the video, so no extra cables are needed.

Cable Splitters (Coaxial): Connect the main coaxial cable from your cable provider to the splitter's input port. Then attach coaxial cables from the splitter's output ports to your TVs, modems, or other devices. Ensure all connections are tight and leave enough space for cable routing.

Step-by-

Step for Cable SplittersTurn off all devices connected to the cable line. Connect the main cable to the splitter's input port. Connect output cables from the splitter to each device.

Secure all connections and check for signal quality. Power on devices and verify proper signal distribution.

Price Range

Audio splitters: $5–$15 depending on type (3. 5mm, USB, Bluetooth).

HDM

I splitters: $15–$30 for 1-in-2-out 4K models. Coaxial cable splitters: $5–$20 depending on the number of outputs and quality. Choosing the right splitter depends on your devices, the number of outputs needed, and whether you require high-definition video or audio fidelity.
