

World's first Internet-connected new energy SUV

Overview

Discover Leapmotor's collection of SUVs and mini electric vehicles on their official site, dedicated to eco-friendly and cutting-edge transportation since 2015.

Key Takeaways

The Roewe RX5, launched by SAIC Motor in 2016, is recognized as the world's first internet-connected new energy SUV.

Overview

The Roewe RX5 was introduced in June 2016 and delivered starting August 2016 in China. Developed jointly by SAIC Motor and Alibaba, it was marketed as the world's first "Internet car," featuring a proprietary YunOS operating system that enabled seamless connectivity between the vehicle, driver, and cloud services, setting a benchmark for intelligent connected vehicles. The RX5 was offered in multiple powertrain variants, including petrol, plug-in hybrid, and fully electric versions, making it one of the earliest SUVs to combine internet connectivity with new energy technology.

Key Features

Internet Connectivity: YunOS allowed real-time cloud services, navigation, and smart vehicle management. Powertrain Options: Standard petrol, plug-in hybrid, and fully electric (ERX5) variants catered to diverse consumer needs. Smart Cockpit: Integrated infotainment and driver assistance systems, appealing to tech-savvy buyers.

Safety and Performance: Achieved high safety ratings in China-New Car Assessment Program (C-NCAP) and offered advanced driving features.

Significance

The Roewe RX5 marked a milestone in the intelligent vehicle industry, bridging the gap between traditional SUVs and smart, connected electric vehicles. Its launch demonstrated the potential of integrating internet services, cloud computing, and electric mobility, influencing subsequent models like the Roewe ERX5 and other connected NEVs globally.

Later Developments

Following the RX5, SAIC Motor continued to expand its internet-connected NEV lineup, including the Roewe ERX5, Roewe D7 DMH, and other intelligent electric SUVs. Other manufacturers, such as MG Motor with the Hector and Voyah with the Zhiyin, introduced internet-connected SUVs later, but the RX5 remains the pioneering model in this category. In summary, the Roewe RX5 holds the distinction of being the world's first internet-connected new energy SUV, combining smart connectivity, multiple powertrain options, and advanced features that paved the way for the modern intelligent electric SUV market.
